

Name:

Pet's Name:

Primary problem(s) that you'd like addressed today:

Cell phone (that we can contact you on at time of appointment):

Next a few general questions that we'd like you to answer. Thank you, this REALLY helps us:

- 1) Has your pet experienced any vomiting? And if so:
 - When did it start?
 - How soon before or after eating does the vomiting occur?
 - Is it consistently similar in contents (i.e. undigested food, liquid/foam, etc)
 - How frequently does this happen?
 - Any chance that they would have eaten something that they shouldn't have?
 - Any recent diet changes or new treats that you've introduced?
- 2) Has your pet experienced any diarrhea? And if so:
 - When did it start?
 - How often does this occur?
 - Is there any blood or mucus that you've noticed?
 - Is it a large volume? Small volume (or spots on the rug)?
 - Any recent diet changes or new treats?
 - Any chance that they would have eaten anything inappropriate?
- 3) Has your pet experienced any coughing? If so:
 - When did it start?
 - How often does it occur? Is it seasonal?
 - Are they distressed when they cough, and/or do they recover quickly?
- 4) Any sneezing? If so:
 - When did it start?
 - Is it sporadic or is it very consistent?
 - Any nasal discharge? If so: Clear? Mucus? Blood?:
- 5) Is your pet urinating abnormally? If so:
 - When did it start?
 - When was the last time that you noticed them urinate?
 - Have you noticed straining? Have they postured w/o producing anything?
 - Have you noticed any blood? Larger than normal volumes? Smaller?
- 6) Any changes to water consumption? If so:
 - Are they drinking more or less water?
 - Do you know when this started?
- 7) Any changes to food intake? If so:
 - When did it start?
 - Any environmental changes that may have contributed to this? (i.e. new pets, stress in the house, etc)
